

# NyMo 150 Pellets Burner for 10-15 kW

## Swedish quality product

– burner and control system made  
and assembled in Sweden

## CE-certified

## NyMo 150

### NEW!

### You can keep your oil boiler!

The NyMo 150 has a  $\varnothing 90$  mm round combustion chamber so it can be installed right where your oil burner was sitting. With NyMo 150 you won't need a new boiler.

- All combustion parts are made of 4mm Swedish steel plate for maximum durability and material life.
- Automatic ignition via a 400W ignition coil.
- Clear menu on the circuit board for easy adjustment and control.
- NyMo burners meet all EU emission requirements.

**For the last 30 years, NyMo Energiprodukter AB has been designing, manufacturing and selling burners and control equipment for bio-fuel heating plants. Our experience guarantees safe, economical operation and maximum service life of your NyMo pellets burner.**

# NyMo 150 Pellets Burner

## 10-15 kW

NEW

New on this burner is that it now fits into the oil burner mount to facilitate installation. No more cutting up of boiler hatches or manufacturing of special mounting plates!

### Product information

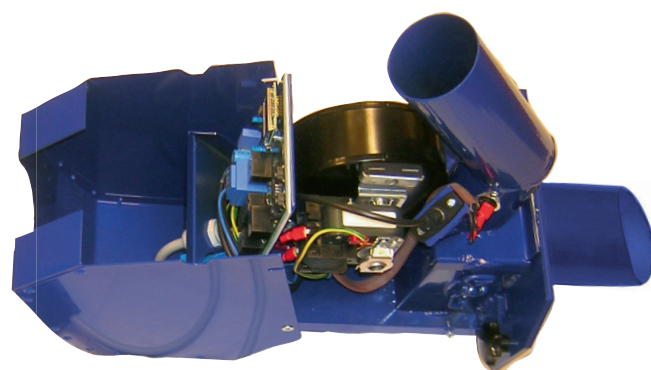

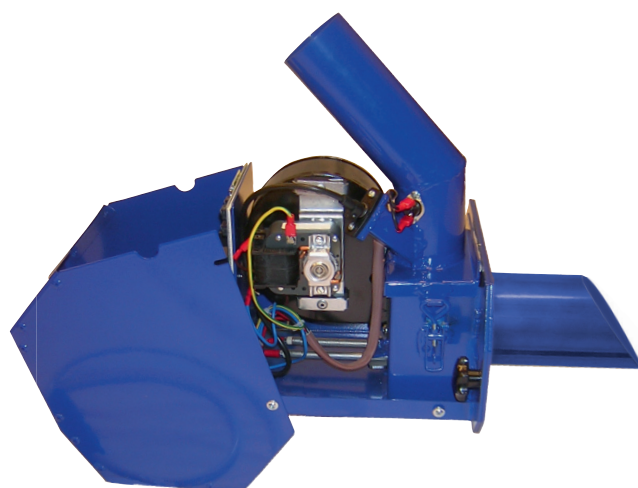

The pictures on this page show the burner's simplified features for installation and service.

This little burner can handle power inputs up to 15 kW provided that the boiler is made for the draught conditions required.

The air generated by the fan circulates inside the rear of the combustion chamber, thus being preheated before passing through the grate.

A mounting frame makes it easy to attach the pellets burner to the boiler opening for oil burners.

Dimensions:  
Combustion chamber:  
Ø 90 mm, 170 mm deep  
Outer dimensions,  
H x W x D: 250 x 170 x 250 mm
